## Zyxel c1000z firmware

1. To start the firmware upgrade, open a web browser and go to or . 2. Login to your modem by doing the following: - Enter the Administrator Username: admin (bottom of the modem)- Enter the Administrator Password: (bottom of the modem)- Select "Apply".3. Select "Utilities".4. Select "Upgrade Firmware".5. Check the "Upgrade Status". If the upgrade status shows: - Upgrade Firmware proceed to the next step to upgrade the firmware. - Firmware is up to date or N/A you are done.6. To download the latest firmware, you can: - Select the "Download" button in the modem GUI or download the latest firmware7. Select the drop down next to "Save".8. Select the "Save as".9. Select "Desktop". 10. Select "Save". 11. Select "Browse". 12. Select "Desktop". 13. Select the firmware file that you just saved to your desktop. 14. Select "Upgrade Firmware". 15. This screen will show the progress of the upgrade. This step will take about 2 minutes. 16. This screen tells you the modem is rebooting. This step will take about 3 minutes. 17. When the upgrade is complete you will be taken to the 'Modem GUI Login' screen. Wait 2 minutes for the DSL and Internet lights on the modem to turn green before trying to access the internet. About Router Firmware: Before you consider downloading this firmware, go to the system information page of the router and make sure that the currently installed version isn't either newer or matching this release. Due to the large variety of router models and different methods for upgrading the device, it is highly recommended that you read and, above all, understand the installation steps before you apply the new firmware, even if you are a power user. In theory, these steps shouldn't be much of a hassle for anyone, because manufacturers try to make them as easy as possible, even if they don't always succeed. Basically, you must upload the new firmware to the router through its administration page and allow it to upgrade. If you install a new version, you can expect increased security levels, different vulnerability issues to be resolved, improved overall performance and transfer speeds, enhanced compatibility with other devices, added support for newly developed technologies, as well as several other changes. If you're looking for certain safety measures, remember that it would be best if you perform the upload using an Ethernet cable rather than a wireless connection, which can be interrupted easily. Also, make sure you don't power off the router or use its buttons during the installation, if you wish to avoid any malfunctions. If this firmware meets your current needs, get the desired version and apply it to your router unit; if not, check with our website as often as possible so that you don't miss the update that will improve your device. It is highly recommended to always use the most recent driver version available. Try to set a system restore point before installing a device driver. This will help if you installed an incorrect or mismatched driver. Problems can arise when your hardware device is too old or not supported any longer, said by Brett C. As an update, this version did enable telnet on both LAN and WAN. Do check your settings. Mine did the same, but a port scan didn't seem to find port 23 open on the WAN side. Is it me, or does the GUI interface seem a lot slower? You can set parental controls on your CenturyLink Zyxel C1000Z modem and WiFi router by visiting your routers web page entering the address ' 192.168.0.1 ' in a web browser, login using your routers admin username and password and setup parental controls. Alternatively you could use our unofficial app that automates the whole process allowing you quick WiFi control to See who's connected to your WiFi, Kick someone off your WiFi, Restrict internet access control to play pause or schedule internet, Toggle Guest WiFi on/off, View and Share your WiFi passwords How do I see what devices are connected to my CenturyLink Zyxel C1000Z modem and WiFi router? The devices tab has all devices listed with current connection and restriction status Device name, IP address, MAC Address, and Device manufacturer details displayed Filter allows you to narrow device list down to All, Active, Inactive, Blocked, Scheduled. You can rename devices and give each device a display order for each management of devices CenturyLink Zyxel C1000Z modem and WiFi router connected devices unknown devices on my network, see them easy with devices page how to see who is on your CenturyLink Zyxel C1000Z modem and WiFi router wifi How do I see who is connected to my CenturyLink Zyxel C1000Z modem and WiFi router? see who and which devices are connected to your WiFi The People tab displays an overview of all the people and their grouped devices connected to your WiFi network. You can add people, assign devices and timed access profiles At a glance see who is online You can control their internet access switching between Schedule / Block / Unrestricted modes How do I setup Timed Access / Schedule on my CenturyLink Zyxel C1000Z modem and WiFi router internet To setup a Timed Access / Schedule for a device or person, visit the Block restrictions page, then select Schedules. In Schedules you can view, create, edit and delete schedules. Once a schedule is created you can simply assign it to either a device or person (group of devices). You can specify any hour in the week you wish to set the internet to be restricted (block our night time, dinner time, lunchtimes). how do I set schedule timed access to a device or person how do I set device with timed access How do I assign a Timed Access Schedule to a device on my CenturyLink Zyxel C1000Z modem and WiFi router router? You can assign a schedule to either a device or a person (group of devices). To assign a schedule to a person, visit the person tab, click on the person's image, and navigate to "Assign Schedule to person" where a list of all schedules is selected. Select the schedule you wish to assign the person and select apply. Then save the update for the person. This will apply the schedule to the person (by assigning the schedule to all the person's devices). Alternatively you can assign a schedule to a device by visiting the Device tab, select the device you wish to assign a schedule, then assign schedule and select the schedule to be assigned, and apply/save updates. How do I disable a schedule timed access on my CenturyLink Zyxel C1000Z modem and WiFi router router? Enable or disable a timed access schedule(s) from the Block/Schedule page. Disabling a schedule to stop the timed access across any device/person, ideal for extending the kids access on school holidays. The schedule will still be assigned to devices or people but disabled (grey icon). You can easy re-enable the schedule. How do I block a device from my WiFi CenturyLink Zyxel C1000Z modem and WiFi router router? Pausing the internet per device could not be easier, visit the Block tab in the app, find the device you wish to block internet access to and press the pause button to block internet access to the device. The paused button will turn solid red when device is fully blocked How do I block a device from my WiFi Block Devices individually Controls provide simple ability to switch between paused (blocked until you change), play (unrestricted access), and scheduled (timed access mode) What types of devices can be blocked from my CenturyLink Zyxel C1000Z modem and WiFi router WiFi router? Any type of device can be restricted internet access, Xbox, Playstations, Phones, PCs, TVs, anything that connects to your CenturyLink Zyxel C1000Z modem and WiFi router router can have its internet access restricted CenturyLink Zyxel C1000Z modem and WiFi router parental controls not working If you can block some devices (iPhone/android phone) but not others (i.e. Games consoles), this could be Universal Plug and Play (uPNP) is enabled in the settings on your router. uPNP is usually enabled by default on most routers. Try disabling uPNP from your routers web page and check if this resolves issues. uPNP is used by games consoles and other devices (TVs etc) so they can easy connect to different services bypassing your routers security settings and they can punch holes in your routers firewalls for example, open up ports to the outside world and bypass some router parental controls. There have been reported issues with uPNP where your TV or printer could get hacked through uPNP for example. Its safer to disable uPNP on your router and this has been known root cause of some of our customers that certain devices just do not block but by disabling uPNP on the router this has resolved the issue. i.e. you block say a PlayStation 4 but the PlayStation still has internet access - uPNP protocol at use - disabling it fixed the blocking issue and console was then controllable by the app. Solution: Disable uPNP on your routers admin web page. See our FAQ for other possible solutions CenturyLink Zyxel C1000Z modem and WiFi router Firmare Firmware app developed against:
